CONSUMER EXPENDITURE

An unusually high rate of personal saving was one of the outstanding developments of 1958. Disposable consumer income rose 7 per cent but expenditure on consumer goods and services rose only 5 per cent. In only two other post-war years has saving represented so large a proportion of income. It is the purpose of this article to discuss the relationship between spending and income and patterns of spending and consumption in the post-war period so that 1958 may be seen in the light of past experience.

Certain characteristics of personal saving in 1958 may be noted. Personal saving deposits with chartered banks rose 20 per cent, which suggests that an unusually high proportion of personal saving was in liquid form. Balances outstanding on the books of instalment finance companies at the end of 1958 were 7 per cent lower than a year earlier, as repayments on past loans ran somewhat ahead of new borrowing. This development is in contrast to those of the three preceding years when such balances rose from year to year, with an especially large increase in 1955. This is related to the trend of automobile sales, but it may also be indicative of some reluctance to incur debt to finance purchases of durables in a period of uncertainty. Sales of life insurance companies (excluding group insurance) rose only 3 per cent, in contrast to increases of more than 20 per cent in the two preceding years, which suggests a preference for other forms of savings. While statistics of personal saving do not permit any comprehensive analysis of the disposition of personal saving, the facts set out above throw some light on the financial position of consumers.

The pattern of consumer expenditure in 1958 is described in some detail in the article "National Accounts, Income and Expenditure—Preliminary Annual and Fourth Quarter, 1958", published in the March issue of the Canadian Statistical Review. To summarize, the 5 per cent increase in consumer expenditure was well distributed over the three main categories of consumption, with gains in services of 6 per cent, in non-durables of 4 per cent, and in durables of 3 per cent. Since consumer prices were higher in all three areas, the corresponding increases in real consumption were lower than the value figures indicate. In that article it was pointed out that in 1958 there was a decline in real per capita consumption for the second year in succession, and that in 1958 all three categories of consumption were so affected. For purposes of the present article it seems desirable to direct more

attention to real per capita consumption in 1958 in relation to the immediately preceding years as well as in relation to the more remote past.

A falling off in real per capita consumption in 1957 and 1958 is evident within most the main categories. For example, per capita real consumption of both food and clothing declined a little in both years. Per capita consumption of tobacco and alcoholic beverages fell a little in 1958, after having risen in 1957. Within services, real per capita consumption of shelter rose in both years but consumption of other services fell in 1958. Real per capita purchases of automobiles, as well as of other durables dropped in 1957 as well as in 1958; in the case of automobiles, the decline in 1958 was the third in succession from 1955 when purchasing was at a post-war peak.

By comparison with 1928, per capita real consumption of food in recent years has increased about 40 per cent, of clothing only about 8 per cent, and of tobacco and alcoholic beverages nearly 100 per cent. For non-durables as a whole, the increase is rather more than 50 per cent, much the same rate of increase as for services. In 1955, the peak year, real per capita purchases of durables were twice as large as in 1928.

Personal Spending in Relation to Disposable Personal Income

Consumer expenditure tends to be comparatively stable over the trade cycle, that is to say it fluctuates much less widely than outlays for capital investment and exports. This relative stability is the result of two factors. Firstly, personal disposable income does not vary as much as National Income, partly because dividend disbursements do not reflect the great instability of corporate profits and partly because most transfer payments are not directly related to National Income; others, principally unemployment insurance benefits, vary inversely with it. With the extension of social security schemes, transfer payments have become a much more important source of personal income in recent years, and in 1958 they accounted for 11 per cent of personal income in contrast to 2 per cent in 1928. Accordingly, a significant divergence between the movement of personal disposable income and National Income is characteristic of the minor cyclical downturns of the post-war period. Secondly, while consumer spending is fairly closely geared to disposable consumer income, part of the fluctuations in income is met

by alterations in the rate of saving. In other words, consumers tend to draw on past savings or run into debt in order to protect their standard of life when incomes are falling and to increase their rate of saving when incomes are rising.

In Canadian experience the relationship between consumer spending and consumer income has not been so close as theories of consumer behaviour might lead one to expect. The depression years 1929 to 1936 inclusive all show spending in excess of income, which is consistent with the behaviour outlined in the preceding paragraph. However, the post-war period shows rates that range from a low of 91 per cent in 1948 and 1958 to a high of 95 per cent in 1954 and 1955. This range of variation is wider than in the United States in the same period. Part of this divergence may be accounted for by the greater relative importance of agriculture in Canada and the fact that so large a part of farm income in this country reaches the recipient in the latter part of the year and presumably influences spending in the following year.

Some part of the instability of spending in relation to income is clearly attributable to spending on durables. Since purchasing of durables is readily postponable, it will presumably reflect a number of factors other than income, among them being the state of consumer confidence, their expectations with respect to future incomes and future prices, the availability of consumer credit, which is the customary method of financing such purchases, as well as consumers' preferences as between different durables or different models of the same product.

Patterns of Spending

In 1958 consumers devoted about 11 per cent of their incomes to the purchase of durables, about 46 per cent to non-durables and 34 per cent to services. The remaining 9 per cent was saved.

In the past decade consumers have devoted about 10 to 12½ per cent of their disposable income to the purchase of durables; somewhat more than the 8 to 9 per cent so spent in the prosperous years of the late twenties. The long-term trend toward durables is particularly evident in purchases of automobiles. In the past decade some 3 to 6 per cent of disposable income was spent on automobiles, the latter figure being that of 1955 when consumer spending was at its peak in relation to income; in every post-war year but 1949 spending on automobiles absorbed more than 4 per cent of disposable consumer income; the comparable figure for the late twenties is somewhat less than 3 per cent. Consumers are also spending a slightly larger proportion of their incomes on appliances, radios and

television sets which in the past decade took 2 to 2½ per cent of income. The year to year variations in this category have been small compared with the shifts in spending on automobiles. In the most post-war years purchases of furniture have absorbed about 1½ per cent of income. Other durables, including house furnishings, absorbed nearly 3 per cent of income.

The proportion of income devoted to non-durables has declined almost without interruption from year to year in the post-war period. In 1949, 53 per cent of income was so spent and by 1958 the proportion had fallen to 46 per cent.

Almost all the non-durable groups show a fairly persistent downward trend in relation to disposable income. Food purchases have fallen from 24½ per cent in 1949 to 22 per cent in 1958, clothing purchases from 10 per cent to somewhat more than 7 per cent, and tobacco and alcoholic beverages from 7½ per cent to 6 per cent. It is interesting to note that the three clothing groups for which statistics are compiled, mens' and boys' clothing, womens' and childrens' clothing, and footwear, all show a downward trend. The only non-durable group where spending has remained fairly stable in relation to income is the one related to the use of automobiles, namely gas, oil and grease, which at about 2 per cent in the past few years represents a higher proportion of disposable income than in 1928.

Throughout the post-war period services have tended to absorb a growing proportion of income, rising from about 29½ per cent in 1949 to about 34 per cent in 1958, which goes a long way toward restoring this category of spending to the position it occupied in relation to income in the late twenties. The most important element in this increase is the higher expenditure on shelter, which absorbed 10 per cent of disposable income in 1949 and about 14 per cent in 1957 and 1958. During the war and immediate post-war period rent controls and the shortage of housing combined to restrict spending on shelter and the past decade has brought about a return to a more normal relationship. Expenditures on medical care have risen a little relative to income and in recent years have represented nearly 4 per cent of income compared with a little more than 3 per cent in early post-war years, thus restoring the relationship of the late twenties. While expenditures on household operation have tended to rise in relation to income in the past decade, so as to represent about 4 per cent of disposable income in recent years, the relationship is still somewhat lower than in the late twenties. On the other hand, the expenditures on transportation, now less than 3 per cent of income, are lower than in the late twenties, reflecting a distinct drop in the

proportion of income spent on purchased transportation, slightly offset by higher spending on user-operated transportation. Expenditures on other categories of services for the most part remained stable in relation to income in the post-war period and had the same relative importance as in the late twenties.

Patterns of Real Consumption

In a framework of generally rising prices in the post-war period, some prices have risen much more than others. For example, the consumer price index rose 25 per cent between 1949 and 1958, but the indexes for food, shelter and clothing rose 22 per cent, 38 per cent, and 10 per cent respectively. The persisting upward trend of prices in the service sector, where prices had hitherto lagged behind the prices of goods, is indeed one of the outstanding features of price movements in the post-war period. Thus, the patterns of spending described earlier reflect divergent price movements as well as trends in real consumption.

When personal expenditure is adjusted to take account of changes in consumer prices, it is apparent that about 13 per cent of total expenditure in 1958 was devoted to durables, 55 per cent to non-durables, and 31 per cent to services. As compared with the late twenties, there is a pronounced shift toward durables and away from services; non-durables now account for a somewhat higher proportion of real consumption.

In the post-war period, purchases of durables have accounted for as much as 14 per cent of real consumer expenditure, compared with 10 per cent in 1928, the shift toward automobiles being particularly pronounced. In 1955, automobiles accounted for nearly 7 per cent of expenditure compared with 4 per cent in 1928. Appliances, radios, and television sets also occupy a considerably larger place in real consumption than they did in the past. In the last two years, durables have accounted for about 13 per cent of real expenditure, that is, more than in most post-war years.

In the past three years, consumption of non-durables has accounted for 55 per cent of the total consumption, which is somewhat higher than the 51 per cent recorded in 1928, and somewhat lower than in the years immediately after the war. In general, the main categories of non-durables have been a remarkably stable proportion of total consumption during most of the post-war period, with food accounting for 26 per cent, clothing about 10 per cent, and tobacco and alcoholic beverages 8 per cent. All three categories are somewhat more important in relation to total consumption than in the late twenties.

In the whole post-war period, 31 to 32 per cent of total real consumption has been devoted to services, in contrast to the 39 per cent so used in 1928, and about 11 per cent to shelter, in contrast to 14 per cent in 1928. Both transportation and medical care are now somewhat less important in the total than they were three decades ago.

Conclusion

What stands out in any review of consumer expenditure in the post-war period is the remarkable stability of patterns of spending and consumption. Even the more volatile durables show a fairly narrow range of year to year fluctuations. This stability is undoubtedly related to the steady, if uneven, rise in personal disposable income in the past decade. It is interesting to note, too, that in 1955, when the rate of increase in personal disposable income was one of the highest in the post-war period, personal spending was at a peak in relation to income and that the rate of spending out of income rose a little in 1953 and fairly sharply in 1954, a period when recessionary influences were present in the economy. Consumer behaviour in 1958 is remarkable not only for the high rate of personal saving but also for the nature of the slight shift in spending patterns. Spending in relation to income was low for virtually all categories of consumer goods. Only services remained close to the position they had come to occupy in the consumer budget.

INDUSTRIAL PRODUCTION

In March, the seasonally adjusted index of industrial production fell off as mining declined. Petroleum and coal output were chiefly responsible. Manufacturing production held firm with both durable and non-durable stable. Electricity and gas fell fractionally.

EMPLOYMENT AND AVERAGE HOURS WORKED

The seasonally adjusted index of industrial composite employment rose marginally in March. The majority of its components were stable with some strength evident in construction. In February, average hours worked per week in manufacturing moved upward with gains in both durable and non-durable goods.

LABOUR INCOME AND FARM CASH INCOME

In March, seasonally adjusted labour income moved up sharply with all components participating in the advance. Farm cash income strengthened in the fourth quarter.

RETAIL TRADE

Seasonally adjusted retail trade fell off in March. Most of the decline originated in grocery and combination stores and motor vehicle dealer sales. Trends in the other outlet types were mixed. Department store sales moved down.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS AND IMPORTS AND CORPORATION PROFITS

In April, seasonally adjusted exports moved down. The decline was widespread with only agricultural products registering a gain over their March level. The seasonally adjusted February imports fell off. Trends were mixed with agricultural products, iron ore and miscellaneous categories accounting for all of the decline. Corporation profits climbed sharply in the fourth quarter of 1958.

MISCELLANEOUS

ADJUSTED FOR SEASONAL VARIATION

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4) Rough cords of 125 cu. ft. (5) In urban areas of 5,000 population and over. As of January, 1957, figures are not strictly comparable to those of 1956 due to the inclusion of additional municipalities in the "urban 5,000 and over" category. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) Prior to January, 1957, this total includes the net amount generated by the more important central electric stations, i.e. companies, municipalities and individuals selling or distributing electric energy. From January, 1957 it includes all generating agencies producing over ten million kilowatt hours per year. The total generated on the old basis for January 1957 was 7,457 million kilowatt hours. (10) End of period. Including personal savings deposits.

2 (1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operations employed by private firms outside the building and civil engineering industries. (4) All manufactured products other than food, fuel and tobacco. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

4

Note.—Until the end of 1957, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1958 and 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration. ⁽²⁾Yukon and North-West Territories not included in figures for births, marriages and deaths. ⁽³⁾Estimates are given by years as of June 1 and by quarters for Canada. ⁽⁴⁾Exclusive of stillbirths. ⁽⁵⁾Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

Revised quarterly data for the historical period 1947-1955 are still in course of being re-worked. This material will be released as soon as possible.

8 ⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. ⁽²⁾Includes adjusting entry. ⁽³⁾Includes residual error of estimate. ⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

Data refer to hourly rated wage earners of firms customarily employing 15 persons or more as reported at the first of the month.

* Formerly these average hours were ascribed to the first of the following month.

⁽¹⁾ Seasonal (formerly supplementary) benefit data included.⁽²⁾ On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.⁽³⁾ The number of new cases of recorded unemployment among insured persons.⁽⁴⁾ Estimates are based on average weekly number of payments.⁽⁵⁾ The number of calendar weeks during which a benefit payment was made.⁽⁶⁾ Revised to relate to the Thursday nearest to the last day of the month.⁽⁷⁾ Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾Excludes gold.⁽²⁾Arithmetically converted from 1935-39=100.⁽³⁾Field and Total Indexes for crop year August 1957-July 1958, inclusive, are revised

again to include final payments for barley and oats. ⁽⁴⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1957 are final prices. From August, 1957 to July, 1958 western wheat prices were initial plus interim payments. Since August 1, 1958, only initial prices are available for wheat, oats and barley.

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

⁽³⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

⁽⁴⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.
⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.
⁽³⁾Customs exports.
⁽⁴⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel, D.B.S.

Note.—Effective January, 1957, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account totals shown are not comparable with those of previous years.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada. ⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 800 sample areas lying outside these municipalities were also chosen for complete enumeration.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. Source: Building Permits, Business Finance Division. D.B.S.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1959, stands at 1,014, minor revision still being required in the table, due to the non-recognition of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Planks and boards, flooring and square timber. ⁽³⁾Hollow blocks including fireproofing and load-bearing tile. ⁽⁴⁾For building insulation only.

⁽⁵⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada. ⁽⁶⁾Includes concrete chimney blocks. ⁽⁷⁾Factory sales of firms which normally account for 90% of total Canadian production.

⁽¹⁾ Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

⁽²⁾ Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

⁽³⁾ Annual data are monthly averages of crop year.

⁽⁴⁾ Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

⁽³⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

June 1957-28

Sept. 1957-34

Dec. 1957-32

Mar. 1958-29

June 1958-31

Sept. 1958-39

Dec. 1958-35

⁽⁴⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁵⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. Beginning in January, 1957, all railways follow the uniform classification of accounts, and the statistics previously shown in the "Other Railways" section in the upper half of the table are combined with those railways already following the new system. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date.

⁽³⁾Mainly deposits of foreign banks.

⁽⁴⁾Capital, real fund and undivided profits as at the latest fiscal year-end.

⁽⁵⁾Including issues payable in foreign currency.

⁽⁶⁾Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans.

⁽⁷⁾Excluding Canadian day to day loans.

⁽⁸⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

⁽⁹⁾Including loans to instalment finance companies.

Note.—This series gives total new settled for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 99 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.

NOTE: Symbols used: Throughout the Review (.) means "not available"; (—) means "nil" or "less than can be shown with number of digits used"; (P) signifies "preliminary" and (*) indicates "revised". In some cases the annual data for 1957 and 1958 are provisional.

DBS Is At Your Service

Day by Day Month by Month Year by Year

The Dominion Bureau of Statistics collects, compiles and publishes statistical data relating to a wide range and variety of the economic and social activities and conditions of the Canadian people.

To make this information readily available to users, DBS publishes some 500 seasonal, monthly, quarterly, semi-annual and biennial reports. Together these contain the statistical facts that measure the state of the national economy, its functioning and its growth.

DBS publishes regular reports on the following and other subjects:

- ▶ Agriculture - Farm Crops, Livestock and Incomes
 - ▶ Construction - Residential - Engineering and General Building
 - ▶ Education - Schools, Universities and Libraries
 - ▶ Foreign Trade - Imports and Exports - Travel - International Payments
 - ▶ Health and Welfare - Public Health - Hospitals - Births, Deaths and Marriages - Crime
 - ▶ Labour - Labour Force - Employment and Earnings - Labour Income - Unemployment
 - ▶ Manufacturing - Beverages and Foods to Tobacco and Wood Products
 - ▶ Merchandising - Retail - Wholesale - Services - Credit
 - ▶ Prices - Consumer - Wholesale - Securities
 - ▶ Public Finance - Federal, Provincial and Municipal Governments
 - ▶ Transportation - Air - Rail - Road - Water - Pipe Lines
 - ▶ Utilities - Electric Power
 - ▶ Fishing ▶ Forestry ▶ Mining
-

Requests for information should be sent to the Information Services Division, Dominion Bureau of Statistics, Ottawa. Write for a free copy of the Catalogue of Current Publications 1959.
